

## City of Brentwood Public Safety

### Brentwood, Tennessee

This new public safety facility will allow the Brentwood Police Department to exist in their own dedicated facility located more centrally to their community. This facility is an example of a complex building which aggregates a variety of users and space types into a consolidated and clearly organized environment. This building will accommodate the police departments, training, investigative labs and operations as well as a 911 center. A public municipal courtroom (approximately 2200 sf) will also be located in the building.

#### design highlights:

-The majority of the building will serve the Brentwood Police with departmental offices and modern laboratory environments offering new investigative capabilities.

-The classroom, defensive tactics, virtual scenario simulation, and firearms range will serve as resources for Brentwood and other area agencies.

-An entirely new emergency call center will also be built with room to expand functionality and public safety oversight for the coming decades.

-There will be a multi-function area featuring an open lobby, public records access, and a municipal court / community room which will provide a new point of public interaction for the city.

-An ancillary structure on the grounds will serve as a new emergency rescue site for a team of first-responders and their ambulance.

#### key features:

- administrative offices and open offices
- classrooms
- community room
- defensive tactics and visual scenarios simulation
- firearms range
- laboratory
- emergency call center
- open lobby
- public records access
- municipal court
